## Evolution – it's ingrained in the DNA of *ferry+*

In a changing world with a dynamic and often turbulent market place your ferry reservations system needs to adapt and evolve in order to meet these difficult and demanding challenges.

*ferry+* continues to evolve to meet these challenging and changing conditions, in fact evolving the features and associated benefits of *ferry+* is ingrained in its DNA.

In its latest release *ferry+* adds innovative and pioneering features including the ability to book multiple vehicles onto the same or different journeys within a single booking.

Additionally the latest release includes our new 'tool tip' help with internal and external links to web pages, pdf documents, Excel spreadsheets, Word documents and Power Point presentations etc, provides ground-breaking levels of online help for both internal and web users.

We firmly believe that moving forward in today's market is the only option to ensure success. And so *ferry+* continues to do just that – move forward – by adding innovative new features that provide real and substantial operational benefits for ferry operators.

**Don't leave success to chance. Contact *ferry+* now and let's move forward together.**

TECHNOLOGY

## Evolution – it's ingrained in the DNA of *ferry+*

At *ferry+* we continually strive to move our ferry reservations technology forward. Our latest release includes many new features including:

### Multi vehicles

A sophisticated multi vehicle and combined multi journey booking capacity. The process is optimised for ease of use and speed of booking.

On one booking users can:

- book multiple vehicles onto the same or different routes.
- each vehicle/journey can have its own ticket type and associated ticket rules with its own price and can be for single or return journeys.
- where passenger names are recorded, named passengers are allocated to their specific vehicles.
- each vehicle on a booking is checked-in separately for its required sailing and the revenue is recognised for each independently.

### Tool tip help

Our new ground-breaking tool tip help is designed to allow both internal and web users to experience the benefit of genuine on-line help.

A fully populated help system is delivered which can be edited and added to by authorised users. Help can be displayed temporarily on hover over, or displayed until closed by the user.

The tool tip can be text or text and a combination of the following:

- internal links to your own web pages and external links to web sites.
- links to pdfs, Excel spreadsheets, Word documents and Power Point presentations.
- display of graphics within the help or links to external graphics.

### Moving forward

We fervently believe that moving forward in today's market is the only option to ensure success. And so *ferry+* continues to do just that – move forward – by adding innovative new features that provide real and substantial operational benefits for ferry operators.

**Don't leave success to chance. Contact *ferry+* now and let's move forward together.**
